

Visual Audit Analytics (VAA)

Version 1.3.1 Release Notes

Release Date: 17 August 2026

This maintenance release improves Alteryx flow imports and the handling of embedded scripts within VAA flows. It supersedes v1.3.0.

Improvements

Alteryx Flow Import

- Added support for importing Alteryx Find Replace tools, automatically converting them to the corresponding VAA Find and Replace task.
- This allows more Alteryx workflows to be imported into VAA with less manual conversion.
- Improved handling of unknown or unsupported Alteryx tools during flow import.
- Unsupported tools are now handled more gracefully, improving the reliability of imported workflows.

Embedded Scripts

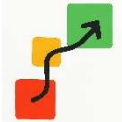

- Improved support for embedded scripts called from within VAA flows.
 - Enhanced handling of automatically generated table names and variables used by embedded scripts.
 - This reduces the risk of naming conflicts between embedded scripts and the main flow, particularly in more complex workflows.

Upgrade Recommendation

All users running v1.3.0 are encouraged to upgrade to v1.3.1, particularly users importing Alteryx workflows or using embedded scripts within flows.

Thank You

Thank you for supporting Visual Audit Analytics and for the valuable feedback you've provided.
